

Konica Minolta introduces CyberSecure Platform, as an addition to its range of End to End Security Solutions

- *The CyberSecure Platform will be available in Singapore, Malaysia from April 2019, and then expanded into ASEAN later*
- *Konica Minolta's CyberSecure Platform is targeted at addressing Cyber Security requirements in IOT era, where not just IT equipment, but sensors and machines are all connected.*

Singapore, 15th April 2019 – Konica Minolta Business Solutions Asia Pte Ltd, an integral value provider, today announced the introduction of CyberSecure Platform. It will be available in Singapore, Malaysia and Vietnam initially, and thereafter expanded to rest of ASEAN later.

SMBs tend to be most vulnerable to sophisticated and non-discriminatory attacks. SMBs are relatively unprotected and unmonitored, hence making them a potential easy target. CyberSecure Platform is also suited for enterprises and Government who require higher and additional protection.

“Today, security is a key consideration in many organisations. Strict regulations have propelled the adoption and awareness of security in many businesses. There is a strong emphasis on keeping documents, information and data safe from threats. Konica Minolta's End-to-End Security is a holistic portfolio of security solutions that delivers multiple levels of defence to safeguard your business.” said Jonathan Yeo, Director & General Manager, Regional Headquarters of Konica Minolta Business Solutions Asia Pte Ltd.

The CyberSecure Platform has been designed in a unique way that allows it to be installed in-line between an Internet router and a firewall, using modern cyber security techniques to protect a network from today's modern and sophisticated cyber-attacks by inspecting packets in real-time as they pass through the platform in both directions (inbound and outbound), at the same time dropping malicious packets before they have a chance to reach the internal network of the organization.
